WORK EXPERIENCE

Software Engineer - 2

July 2024 — Present

ByteDance FZ LLC

Dubai, UAE

- Streamlined Chinese e-commerce order system per ByteDance protocols, leading to a quarterly savings of 30 person-days.
- Engineered a generic architecture for order creation, streamlining 20+ source integrations and reducing onboarding from 3 weeks to 1.5 days.
- Implemented ByteDance SCM team's first Open API for procurement, enabling external integrations.
- Developed a Resource Management System at ByteDance supporting multiple business onboardings and managing CNY 10B in value.
- Built an AI-assisted incident-investigation proof of concept and a Python evaluation harness with 7 sanitized scenarios to assess investigation quality.
- Owned end-to-end development of a Procurement CLI surfacing procurement APIs as agent-consumable commands, unlocking custom development for downstream businesses and simplifying high-risk procurement operations for buyers.
- Contributed to ByteCLI, an internal developer CLI for managing ByteDance's cloud infrastructure, streamlining operational workflows across engineering teams.

Software Development Engineer - 1,2

May 2021 — June 2024

Dealshare.in

Abu Dhabi, UAE

- Designed and developed Warehouse Management System(WMS) to manage and track various processes of warehouses, handling 1 lac+ inventory movements per day.
- Streamlined the creation logic of Stock Transfer Notes (STNs) used for transferring inventory between warehouses, resulting in a 10x reduction in overall processing time and a 3x decrease in infrastructure costs. Achieved this by evenly distributing the workload across multiple smaller containers.
- Configuration of Jenkins job for deploying multiple tasks in a pipeline improving the overall deployment time by 3x.
- Led a team of Backend, Frontend and QA engineers to ensure seamless implementation of payout features.
- Led a team consisting of backend, frontend and QA engineers to successfully implement Warehouse Management System, improved manpower visibility and enhanced the tracking of inventory movement.
- Refactored the monolithic supply chain service into a distributed architecture composed of numerous small-scale microservices.

Machine Learning Intern

Dec 2019 — Jan 2020

VeraTech Intelligence

Gurgaon, New Delhi

- Implemented a parser using bs4(beautiful soup) in python to parse a website and populate mysql database with the extracted data.
- Implemented Content Based Image Retrieval System (CBIR) for finding out similar images from a huge corpus of images.

EDUCATION

Indian Institute of Information Technology Guwahati, Guwahati, Assam

July 2017 - April 2021

Bachelor of Technology in Computer Science And Engineering

CGPA 8.5/10

Primary Coursework: Object Oriented Programming, Data Structures and Algorithms, Software Engineering, Database Management Systems, Machine Learning

SKILLS

Programming / Scripting Java, Golang, C++, Python, JavaScript, PHP, Git

Languages

Framework / Libraries Spring, Node, React, Tailwind, Yii2.0

Database Servers MySQL, MongoDB, Redis

Tools Git, Jenkins, AWS, Grafana, Datadog

PUBLICATION

Deep Unsupervised Methods Towards Behavior Analysis In Ubiquitous Sensor Data

2020-2021

- Behavioral analysis (BA) on ubiquitous sensor data, the task of finding the latent distribution of features for modeling user-specific characteristics. These characteristics, in turn, can be used for a number of tasks including resource management, power efficiency, and smart home applications.

ACADEMIC PROJECTS

Course Registration System

Sep 2020- March 2021

- A Web-based software aimed at automating the registration process of the Institute.
- Technology Stack being used was ReactsJS for building UI in the frontend and ExpressJS sever in the backend.
- MongoDB was used as a NoSQL Database.

AutoEncoder

Aug - Oct 2019

- Implemented an AutoEncoder-based image compression method that achieved a remarkable 10x compression ratio while maintaining minimal loss in the reconstruction process.
